VersaFlex™

NFPA 1951 & 1977 Dual-Certified Uniforms

This dual-certified, NFPA 1951 and 1977 garment offers more protection than a station uniform but is less cumbersome than structural turnouts for non-structural calls. The innovative garment is soft, offering an excellent combination of flash/thermal protection, durability, and comfort. VersaFlex is breathable and engineered to provide maximum protection without weighing you down. It also provides great range of motion and flexibility when maneuvering in tight spaces. Available in dual-certified fabric options: Sigma, Westex® DH RipTwill, and singular-certified NFPA 1977 Nomex.
